V.I.S. VENEERS SYSTEM

In addition to traditional dental restorations, for which we are proud to be innovative, we now offer a new solution for aesthetic problems.

The VIS veneers System is an alternative that maintains intact natural teeth (no preparation) and helps to improve color, alignment, shape and diastem problems.

Unlike classic veneers, ours are composed of zirconium coated with a ceramic layer. The thickness is 0.3 mm and are tailor-made (color, shape, transparency) and meet the needs and wishes of each patient.

Our is a non-invasive system that stands out from its competitors to be completely customized, painless, reversible and quick.

Benefit for patient	Suitable to problems like	Contraindicated in case of
Without anesthesia	Fit	Lack of enamel
Painless	Shape	Absence of more than half of the crown
Fast	Alignment	Milk teeth
Not invasive	Ricostitution	Overcrowding
More resistant to traditional feldspar ceramics.	Discolouration	Periodontitis
	Diastema	

BEFORE

AFTER

CAD-CAM

Using the latest Cad-Cam scanner models we can produce a perfect copy of the patient's dental arches. Along with a clear understanding of the occlusion, the Cad-Cam technique enables our technicians to anticipate the final aesthetic of the prostheses that they will create with a micron precision.

TRACKING

We are very serious when it comes to quality. A perfect production is our golden rule. Many controls are performed during the production of any type of dental prosthesis.

All our laboratory products are carefully checked by our technical experts throughout the manufacturing process. Traceability is ensured both by the quality of materials and by the technique.

BEFORE

AFTER

STEPS

Step 1

The dentist takes the impression of the dental arch and it analyzes the situation of your front teeth. It suggests the correct color of veneers with a sample and choose the appropriate form with the patient

Step 2

Send the impression to the VIS laboratory. We will create the right restoration for each case.

Step 3

You will receive VIS veneers System in your dental office in ten working days and you will easily install it in the mouth of the patient.

**VIS gives to your patient perfect
aesthetical teeth and a beautiful smile
to be show immediately.**

OUR LABORATORY

Very Important Smile

Our laboratory is located in north Italy.

It is made up of the best and most advanced technologies the dental industry can offer.

Our technicians, with great experience and professionalism, create superior quality restorations.
